A construction shot (5) provides a revealing glimpse of the villa's cast concrete shell, portions of which were later masked with a lightweight metal skin. Throughout the house, references to the Villa Savoye and the Villa Tugendhat are apparent: in the slow rise of the entrance ramp (9) hugging the north wall; in the kitchen's free-standing translucent curved partition (6); and in the free space of the living room, which opens onto the garden via sliding glass doors (7). A secondary stair at the far end of the elongated structure (8) provides separate access to the master suite.

Invented by a French engineer at the dawn of the industrial age, the evolution of the motorcycle has become the great popular theme of the modern era. Function, design, precision, technology, and speed have become common obsessions of successive generations of designers for 130 years. The notion of mechanized transport first emerged in an era noted for its preoccupation with time, space, and speed. It is this love of dynamism that inspired the invention of the motorcycle.

The history of the motorcycle officially began in 1868 when two French inventors attached a small steam engine to a velocipede to create the first motorized bicycle. The Michaux-Perreux was capable of a maximum speed of 19 mph. At the end of the 20th century, a marriage of high technology, space age materials, and deliberate sex appeal produced sport bikes capable of speeds close to 200 mph. Two machines, the Michaux-Perreux and Massimo Tamburini's MV Agusta F4, are on opposite ends of a continuum that reflects an extraordinary aesthetic adventure inside the limits imposed by a two-wheeled motorized machine.
